Abhilash Susarla aksusarla.github.io ↗

Score it before you post.

- Start with Reels and Shorts creators in India, then take what works global.
- Bring them in with a free Virality score on their own Reels, plus free images.
- Keep them with every top model and quick fixes in one place.

Who would I go after first?

Q1 · Segment and why now

- Creators in India on Instagram Reels and YouTube Shorts with **1K to 100K followers**.
- They post several times a week.
- Big creators have editors. These creators do everything themselves.

Why creators?

1. They need fresh content every week.
2. Flowy has what they need: presets, voiceover, dubbing.
3. Every post they share shows Flowy to their followers.
4. Content is their income, so they will pay.

Why now?

1. November and December are peak posting months.
2. 30 days is short, so paid ads buy speed.
3. Users of rival tools are unhappy with credits.
4. India is the launchpad; ads also tested in US, UK, UAE.

What brings creators in?

Hook 1: the Virality score, at 20 credits a score

How it works, Flowy docs ↗

"Know if your Reel will work before you post it."

How does it work?

1. Upload a Reel or an image and pick the platform.
2. Get a score out of 100 on hook, retention, shareability, clarity and platform fit.
3. Get clear fixes, make them in Flowy, and score again.

What I would propose to the product team

- Back-test it on creators' past Reels, with consent.
- Improve it with ML on real engagement data.
- Let it learn from every creator who connects an account.
- Then launch it loudly with a "Score your Reel" week.

Hook 2: free unlimited images

- Use them for thumbnails, covers and carousels.
- A first win in the first session, at no cost.
- On their own they build a habit, not loyalty.
- The Virality score and video take them further.

Getting them started: hand-holding based on AI fluency

1. A 3-question quiz at sign-up to gauge how comfortable they are with AI.
2. A guided path: presets for beginners, the canvas for confident users.
3. Short guides and videos for every tool, sent at the right moment.

Where would I find them?

Q2 · Channels

Google and Meta ads

- Fastest reach in 30 days.
- Target creators by interest.
- Lead with "Score your Reel."

~250 sign-ups

DMs, then calls

- Score a creator's Reel, send it.
- Call those with 10K+ who reply.
- 40 DMs and 10 calls a day.

~150 sign-ups

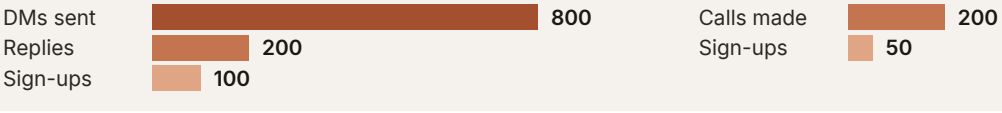

AI-tool reviewers

- Early access for AI reviewers.
- Ask for honest reviews.
- Use the best ones as ads.

~100 sign-ups

How do DMs and calls turn into sign-ups?

My estimates

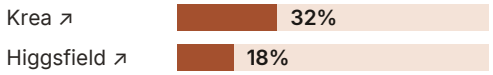

How would I win competitors' users?

Higgsfield

- Their users already pay for AI tools, so they are warm leads.
- Complaints cluster on credits and billing; Freepik ↗ too.

One-star reviews on Trustpilot

Higgsfield still averages 4.0 out of 5 overall.

Their pain point	Flowy answer
1. Credits run out fast; costs are unpredictable	**Free unlimited images; cost shown before every run** ↗
2. Paying for failed generations	**Charged only on success; failed runs refunded** ↗
3. Juggling several subscriptions and models	**Every top model on one canvas, on one bill**

The pitch: "Every model, free images, and you only pay for what works."

How would I get to 500 in 30 days?

Q3 · 30-day plan

- **Ads (~250):** a ₹10,000 test, then scale below ₹100 a sign-up.
- **DMs (~100):** 800 sent, 25% reply, half sign up.
- **Cost and capacity:** one free score per DM (16,000 credits in all); AI drafts each DM so I can send 40 a day.
- **Calls (~50):** 200 calls, 25% sign up.
- **Reviews (~100):** 4 reviews x 25K views, 1% click, 10% sign up.

Week 1
Learn and set up
- Learn every Flowy tool.
- Set up HubSpot and ads.

Getting ready

Week 2
Launch
- 40 DMs, 10 calls a day.
- First reviews go live.

200 of 500 sign-ups

Week 3
Double down
- Fund the best channel.
- Best results become ads.

350 of 500 sign-ups

Week 4
Convert
- Nudge creators to video.
- Interview 20 creators.

500 of 500 sign-ups

How would I blend online and offline?

Find the right creators
- Shortlist by niche, size and rhythm.
- Favour those already trying AI tools.
- Track leads in HubSpot; I check each.

Online campaigns
- A "Score your Reel" hashtag week.
- Daily before-and-after Reels.
- Best shared scorecards get boosted.

Offline, for trust
- Monthly meetups with live scoring.
- Workshops at college media clubs.
- A real call to every warm lead.

How would I know it's working?

Q4 · The one metric

The one metric
Weekly active creators
Made something in Flowy this week.
Week 4 target: ~175 (est.)

01 **Sign-ups** Is outreach landing?	02 **Active users** Are they using it?	03 **Growth** Up week on week?	04 **Usage by tool** Is the score pulling?
05 **First creation** Is it easy to start?	06 **Retention** Do they come back?	07 **Cost per user** Best channel?	08 **Free to paid** Is it revenue yet?

What comes after the first 30 days?

Longer term, outside the 500 target

Product ideas
- A content-block helper that suggests what to post next.
- A "Made with Flowy" outro for the end of creators' videos.

Growth and research
- Push Flowy-made content online, organic and paid.
- Weekly tracking of launches and ads from rivals.
- A running market study: needs, pricing, regions.

How would I run this?

I'd learn the product inside out first, then pass what creators tell us to the team every week so we can fix and ship fast.

Daily
- A 9 am numbers update, as at Zetwerk.

Weekly
- Ship small fixes fast from feedback.

Day 30
- Write up what worked; take it global.

Ideas I am borrowing: Higgsfield's creator programme ↗, "Made with Canva" ↗, ChatGPT's viral image week ↗.

↗ marks a clickable source. Funnel rates and targets are my own estimates.
